A Fast And Cost Effective Solution For Small Applications

We are the pioneers in introducing the Compact Road construction machinery in the UAE, efficiently completing all our projects on time. We have specialist teams and unique, state of the art equipment for asphalt reinstatement works.

Our quick mobilization and demobilization ability is a reflection of our efficiency and ensures that our customers do not face unnecessary road closures. We protect existing services and roads under repair by using suitable width and compaction.

At RAD International, we operate our own in-house road surfacing operation including the RAD Asphalt Factory, RAD Laboratory, Workshop and Road Marking which facilitates small projects in the fastest and most cost effective manner. This gives us full control over plant availability, costs and schedule.

A well maintained road network is imperative to the UAE and the world's economic and social development.

SUPER 800 VOGELE

Pave Widths: 0.5m - 3.2m

Clearance Width: 1.2 m

Compacting systems:
Tamper and vibrators (TV)

Slim Design-Ideal for Transport and Paving

A

Road infrastructure maintenance calls for structured planning and highly trained professionals who know how to get the job done correctly, safely and efficiently. Machines are continually changing and new technology and operating techniques are being invented all the time. At RAD International, our passion in road construction means the future of the road building industry is in safe hands.

Road Marking Section

RAD International is the preferred contractor for road marking solutions with its latest machines and equipment, providing a one- stop shop for road construction and road marking needs. Although road marking is not a lucrative part of the business, RAD International provides this and other services related to road construction under one roof, for the clients convenience.

We believe in facilitating our clients from the beginning of their journey to the end, so they can save time and other precious resources. When it comes to road markings on public roads and highways, RAD International is a name you can trust. RAD provides the finishing touch to its construction work, completing the job for its clients and saving them the hassle of going to various vendors.

D

A. SUPER 800 VOGELE Traked Paver : The SUPER 800 VOGELE due to its very advanced compact design is ideal for a wide variety of paving applications. It is ideal for paving jobs like roads in municipal areas, tracks & roads on factory grounds, indoor applications, footpaths and cycle paths and any other work from rehabilitation through to building of small roads.

B. JW30 Tyred Roller: This machine is designed to provide the best possible field of view both forward and to the rear. JW30 is a high performance roller with large ballast compartments for uniform distribution of load over the wheels. The roller can optionally be equipped with air-on-the-run systems permitting tyre pressure adjustments from the operator's station.

C. CC750 Tandame Asphalt Roller: The CC750 is a member of small asphalt rollers family. With a drum width of 750 mm it's primarily used for small-scale compaction work such as pavements, cycle paths, small roads and small parking areas. Propulsion and vibration naturally come as standard on both drums.

D. SUPER 800 VOGELE, performing a small paving application (50 cm to 320 cm wide)
